

MST BLOCKCHAIN BUILDATHON

Official Track Guide

About the MST Blockchain

The MST Blockchain challenges builders to create innovative, practical, and scalable products powered by MST Blockchain. Go beyond traditional DApps, basic wallet integrations, and projects that simply bolt blockchain on as a feature

Track Requirements - Mandatory

All five requirements below are mandatory for prize eligibility. Read them carefully before building.

1. MST Blockchain Usage

- Your project must use MST Blockchain as a meaningful, integral part of the product.
- A simple wallet connection or single isolated transaction is not sufficient.

2. MST Testnet Deployment

Every project must be deployed on MST Testnet before submission.

Your submission must include:

- MST Testnet contract address
- At least one verifiable MST Testnet transaction hash
- A working application or demo link (wherever applicable)

3. Public GitHub Repository

Every team must submit a public GitHub repository with the project's full source code, including:

Smart contracts + frontend / backend code

README with MST integration details, contract addresses, and setup instructions

4. BridgeKey Wallet Integration - Strongly Recommended

BridgeKey is the official non-custodial wallet for MST Blockchain.

Teams are strongly encouraged to integrate BridgeKey for wallet connection, network switching,

and smart contract signing in their DApps.

- **BridgeKey Website:** bridgekey.io
- **Chrome Extension:** chromewebstore.google.com/detail/bridgekey/bfjojdcfenehemjgilepdjomkpginlkg
- **Android App:** play.google.com/store/apps/details?id=com.bridgekey

5. Working Product + On-Chain Proof

A working deployed application is strongly preferred over mockups.

Projects that judges can interact with and test will have a significant advantage.

Your project must have at least one verifiable MST Testnet transaction demonstrating core functionality.

MST Blockchain Developer Resources

Use the official MST tools and documentation to build quickly on MST Blockchain. Start with the Vibe Kit for rapid scaffolding, use the JS/TS SDK for contract interaction, and verify transactions on MSTScan.

Judging Criteria

What Wins at This Hackathon

Problem → Solution → Meaningful MST Usage → Working Product → Testnet Deployment → Scale

Strong ideas, meaningful blockchain integration, and solid execution is important.

Use of AI & Originality Policy

AI coding assistants, AI agents, MCP, Vibe Kit, SDKs, open-source libraries, and other developer tools are all permitted. Every team must fully understand the code they submit and be ready to explain their architecture, MST integration, and implementation decisions to judges.

⚠ Projects found to be substantially copied, plagiarised, or using fake / misleading deployment or transaction data may be disqualified from all prizes.

Final Project Submission

All teams must complete the final submission form before the hackathon deadline. This is compulsory to be eligible for any MST Blockchain Track prize. Ensure all links are public and accessible to the judging team.

SUBMISSION FORM — COMPULSORY TO FILL BEFORE HACKATHON ENDS

<https://forms.gle/fkkVbfiwKmbL3BFp9>

GitHub Repository · Testnet Contract Address · Transaction Hash · Demo Link · Demo Video

Social Award – 10 TEAMS

The Social Award recognises the team that creates the most creative and engaging content while building their project on MST Blockchain. It is judged completely independently from the main technical awards.

Eligibility - Your video must:

- Be at least 30 seconds long
- Show your face or team members on camera
- Be publicly posted on Instagram
- Mention @mstblockchain and @newro_tech in the post or video
- Clearly show or mention you are building on MST Blockchain
- Be submitted through the final submission form before the deadline

Follow & Tag Us

Post your build journey, tag us, and mention @mstblockchain. Join the community and show the world what you are building.
